ABOUT ME

Passionate about AI, continuously expanding my knowledge, and eager to apply the latest advancements to real-world projects. Currently focusing my studies on Large Language Models (LLMs) and their applications in creating innovative, impactful solutions.

ACTIVITY

Project: Emotional Face Detection | 2023

- Collected and preprocessed image datasets for model training. Trained and fine-tuned deep learning models to improve accuracy. Developed a Flask-based backend for image emotion detection. Led a team, coordinated tasks, and managed workflow for project execution

Project : Air Writing and alphabet recognition | 2024 -2025

- Collected and preprocessed image data for model training. Developed and optimized CNN models (VGG16 & MobileNetV2), achieving 97% accuracy in handwritten alphabet recognition.

Thai-link.net Website | 2025

- Contributed as a Full Stack Developer to the development of Thai-link.net, implementing frontend and backend features and deploying the system to a production environment to support Thai entrepreneurs through news and promotional content.

Mini Project : RAG | 2025

- AI Product Search System: Developed a RAG application integrating Supabase (PostgreSQL/pgvector) for data/vector storage, BAAI/bge-m3 for embeddings, and gemma3:1b (Ollama) as the LLM, all connected via a FastAPI backend.

AI-Powered Procurement Strategy Support System | 2025–2026

- Designed and developed an AI-driven procurement strategy support system, including ISO/IEC 29110 documentation, a web application, Hybrid RAG–based knowledge retrieval and chatbot, machine learning models for purchase demand prediction, and deployment to a production server.

EDUCATION

Bachelor of Science in Computer Science
Suan Dusit University — Graduated May 2025
GPA: 3.83

CERTIFICATES

Neural Networks and Deep Learning | 2022
DeepLearning.AI (Coursera)

SKILLS

- HTML and CSS
- MySQL Database
- GitHub version control
- Postman API testing
- Flask python
- Fast Api
- Huggingface
- OpenRouter
- Ollama
- ChatGPT
- Gemini
- Cluade
- Open-CV
- CNN
- VGG16
- MobileNetv2
- MediaPipe
- Web Scraping
- Embedding
- LogisticRegression
- Supervised Fine-Tuning LLM
- Retrieval -augmented generation
