Address: 58/41, Sao Thong Hin Subdistrict, Bang Yai District, Nonthaburi 11140

ABOUT ME

AI enthusiast and developer specializing in Large Language Models (LLMs) and Generative AI. Driven by transforming state-of-the-art AI research into scalable, real-world solutions that deliver measurable impact.

PROJECT

Project: Emotional Face Detection | 2023

- Collected and preprocessed image datasets for model training. Trained and fine-tuned deep learning models to improve accuracy. Developed a Flask-based backend for image emotion detection. Led a team, coordinated tasks, and managed workflow for project execution

Project : Air Writing and alphabet recognition | 2024 -2025

- Collected and preprocessed image data for model training. Developed and optimized CNN models (VGG16 & MobileNetV2), achieving 97% accuracy in handwritten alphabet recognition.

Mini Project : RAG | 2025

- AI Product Search System: Developed a RAG application integrating Supabase (PostgreSQL/pgvector) for data/vector storage, BAAI/bge-m3 for embeddings, and gemma3:1b (Ollama) as the LLM, all connected via a FastAPI backend.

WORK EXPERIENCE

Full Stack Developer | BEATRIX CO., LTD. | 2025

PIMMZ Website | 2025-2026

- Contributed as a Full Stack Developer to the development of PIMMZ, implementing frontend and backend features and deploying the system to a production environment to support Thai entrepreneurs through news and promotional content.

E-Bidding System | 2025–2026

- Developed an ISO/IEC 29110-compliant E-Bidding System using Next.js and NestJS, managing the entire lifecycle from requirement analysis and UX/UI design

Hackathon AI-Powered Procurement Intelligence Platform (AIPP) | 2026

- Built an end-to-end AI procurement platform using Next.js, NestJS, and FastAPI implemented demand anomaly detection, 24-month ARIMAX price forecasting linked to global commodity markets, and an LLM-assisted buy-signal engine to optimize corporate purchasing decisions.

AI-Powered Procurement Strategy Support System | 2025–2026

- Designed and developed an AI-driven procurement strategy platform featuring a Next.js web application, a Go core engine, and a Python AI service. Implemented Pareto spend analysis (ABC), Kraljic matrices, machine learning models for purchase demand prediction, and a Markdown-based RAG system for contextual knowledge retrieval and chatbot advisory.

SKILLS

- HTML and CSS
- MySQL Database
- GitHub version control
- Postman API testing
- Uvicorn
- Fast Api
- Huggingface
- OpenRouter
- Ollama
- ChatGPT
- Gemini
- Claude
- Open-CV
- CNN
- VGG16
- MobileNetv2
- MediaPipe
- Web Scraping
- Embedding
- LogisticRegression
- Supervised Fine-Tuning LLM
- Retrieval -augmented generation
